

Platform Enhancement Completion and Payment Request

A completion summary for the recently delivered Wonmart web admin, reporting, inventory, and mobile sales-order enhancements.

Document date	17 September 2026
Client	Wonmart Client
Project	Wonmart platform enhancement delivery
Delivery status	Completed and ready for client review

Completed Deliverables

The scope below has been implemented across the web administration portal and the agent mobile workflow. These items are designed to improve visibility, operations, invoice access, reporting, and inventory control.

#	Completed area	Delivered functionality	Status
01	Agent admin dashboard	Delivered a dedicated agent administration dashboard with clear overview cards and direct navigation to the selected agent's operational areas. The dashboard gives administrators a single starting point to review sales activity, inventory value, pending balances, shops, routes, payments, and reporting without moving between unrelated screens.	COMPLETED
02	Admin agent management	Expanded the agent management workspace so administrators can open an individual agent profile and manage the associated sales, reports, inventory, shops, routes, payment records, and profile details. The updated structure reduces manual cross-checking and keeps agent-specific operational data together in one managed view.	COMPLETED
03	Agent-wise invoice access	Added a dedicated Invoice column to agent sales records with View and Download actions for every saved shop sale. The View action presents order items, return items, sample products, paid amount, balance, and totals; the Download action produces the saved invoice as a PDF for customer or accounting use.	COMPLETED
04	Sales report suite	Implemented reporting views for invoice-wise, agent-wise, date-wise, product-wise, and supplier-wise analysis. These reports support operational monitoring and commercial review with date filters, searchable report tables, calculated values, and export options so users can review performance at the required level of detail.	COMPLETED
05	Stock report suite	Delivered Full Stock and Low Stock reports that show product availability, cost and sale value, estimated profit, supplier information, and stock status. The reports include filters, CSV/PDF export support, product-name ordering, and exclusion of products that have been hidden from active inventory views.	COMPLETED
06	Agent report suite	Delivered Agent Sales, Agent Stock, and Agent Low Stock reports for reviewing distributor-level performance and inventory risk. The Agent Sales report includes a date-range selector, invoice actions, totals, returns, agent-price cost, profit, and cash received; the stock reports provide the relevant agent inventory and low-stock data.	COMPLETED

#	Completed area	Delivered functionality	Status
07	Inventory table improvements	Improved inventory tables with ascending product-name ordering, clearer product and value columns, status controls, and a View Hidden workflow. Product visibility can now be changed per record, saved against the relevant store entry, reviewed in a separate hidden-products popup, and restored when the product should become active again.	COMPLETED
08	Sample product sales workflow	Added an optional Add Sample Product section to the agent mobile Create Sales Order screen. Users can select any product available in the agent store, enter the quantity, add one or more sample items to the order, and review the selected samples before confirming the sale; confirmed sample quantities are included in the applicable agent-store stock deduction.	COMPLETED
09	Invoice and return enhancements	Enhanced both thermal and A4 invoice generation to show return and sample information whenever those records exist. Return items are presented with product name, quantity, price, amount, and return total; sample products are presented in their own section with item names and quantities, positioned appropriately for each invoice format.	COMPLETED
10	Sales performance summaries	Added sales, total cost, total profit, cash received, and returns summary cards to the agent sales and report experiences. Total cost is calculated from each sold item's quantity multiplied by its matching agent-store shop price, using efficient product-price lookup so the result reflects the assigned agent price instead of the retail selling price.	COMPLETED
11	Merged product stock reports	Added separate Merge Products stock reports for both main warehouse inventory and each agent's agent_store inventory. Records with the same main-warehouse barcode or the same agent Product ID are combined into one product family; batch/date suffixes are removed from the displayed name, quantities and stock values are summed, and weighted unit prices are used when historical batches have different prices. The merged tables, summary cards, CSV exports, and PDF exports all use the same combined data.	COMPLETED

Delivery Notes

- All completed items are integrated with the existing Wonmart data structure, including agent_store, sales payment, sales record, and invoice information.
- Report and invoice features include the relevant products, returns, samples, totals, and status information where the source data is available.
- Inventory status changes are saved against the individual agent-store product record, allowing hidden products to be restored without deleting stock data.
- The delivered web interfaces include responsive tables, searchable lists, date-range filters, export options, and usable empty/loading states.

Key Operational Outcomes

Operational visibility	Administrators can review agent activity, stock, reports, shops, payments, and invoices from connected management views.
Invoice completeness	Invoice views and downloads include order items, return items, sample products, and calculated totals when those records are available.
Inventory control	Product visibility can be managed without deleting stock records, helping teams keep active views focused while retaining restore access.

**COMPLETION
DECLARATION**

The listed enhancements have been completed and prepared for client review, acceptance, and payment processing.

Commercial Summary

Commercial completion summary for the completed Wonmart platform enhancement scope.

PROJECT DELIVERY VALUE

Rs. 30,000.00

Completed scope

Wonmart web admin, reporting, inventory, invoicing, and agent mobile sales enhancements

Commercial Scope

The stated project delivery value covers the completed web administration, reporting, inventory, invoice, and agent mobile sales-order enhancements described in this document.
